

Newnham Junior School Science Vision and Principles

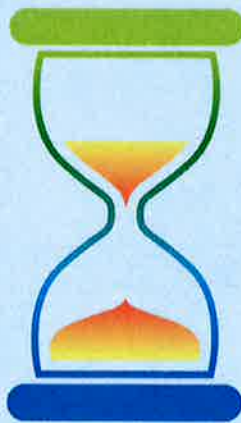

At Newnham, we aim to develop our children's understanding, enjoyment and interest in science so that they appreciate the impact science has on their lives and the world in which we live. We encourage them to ask questions, investigate, explore and explain their thinking thus inspiring them to be inquisitive learners and scientists.

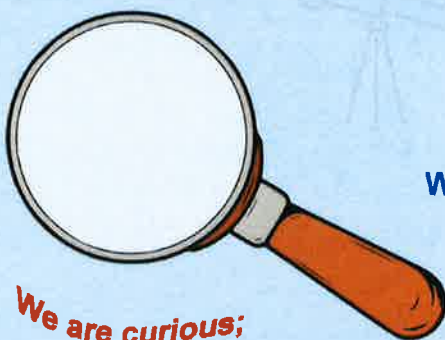

We learn through
engaging hands on activities
and investigations in the
classroom and outside

We use knowledge and skills
from other subjects

We use scientific vocabulary
to explain our findings

We are curious;
we ask questions and want
to find out the answers

We are inspired, challenged
and resilient in our learning
